

Videoscan Instructions:

Videoscans should be conducted indoors under well lit artificial lighting, or outdoors if overcast. Using a video camera, record your subject by slowly walking around them while keeping your subject

centered in-frame. The 'videoscan' follows a tight timing/position regiment, and should take 50 seconds to complete. The subject must stay perfectly still while being recorded.

Timing/Position

Start Side View (20 seconds)-

Frame your subject depending on full body or bust at a 90 degree side view. Start recording and slowly walk around your subject keeping your camera at the same angle while keeping him/her centered in the frame.

Downward Angle View (20 seconds)- As you make a complete circle, slowly raise the camera and point downward at an angle still keeping your subject centered in-frame. Circle again without pausing during the height change.

Detail View (10 seconds)- After circling again while recording the downward angle, slow down and move the camera closer toward the subjects face to capture higher facial detail.

Become a Hursto Presto Studio 3D Videographer!

Hursto Presto Studios initiated a beta program to bring 3D scanning to photographers and videographers without them having to mess with CAD or 3d printing.

Just like snapping a picture with a camera and having somebody else develop it, now you can shoot a 50 second video and have someone else convert the video into a full color 3D figurine in your subject's likeness!

Videoscans

Use video to record your subject by walking around them while keeping them centered in-frame.

Then send your video to Hursto Presto Studios to get the video images extruded, edited, and processed to create a 3D Selfie figurine or bust of the subject you videoscanned!

SPECIAL BETA FULL COLOR SANDSTONE 3D PRINT PRICING

<u>Figurines</u>	<u>3"</u>	<u>4"</u>	<u>5"</u>	<u>6"</u>
Standard Price	\$40	\$80	\$120	\$160
Your Price	\$30	\$60	\$90	\$120

<u>Busts</u>	<u>3"</u>	<u>4"</u>	<u>5"</u>	<u>6"</u>
Standard Price	\$70	\$140	\$230	\$330
Your Price	\$50	\$100	\$180	\$250

3D Videography Beta

Our 3D Videography program is in Beta throughout 2017 and we invite you to participate.

Go to hurstopresto.jimdo.com and fill out the beta registration form to help us test and improve remote videoscanning. No charge for processing videoscans. No purchase necessary.

Once there, you will find more detailed documentation to help ensure successful Videoscans. 3D Videographers get reduced pricing on 3D printing during the beta.

Cya there!
